

Untangling the web of price reductions:
 a pricing guide for the purchase of ARVs for developing countries
10th Edition (September revision)
Electronic Update

Update number: 2. Date: 3rd March 2008

Price increases in this update are in **Red** while price decreases are in **Blue**

Highlight:

- GSK has announced reductions in ARV prices for Least Developed Countries and Sub-Saharan Africa as well as countries with eligible Global Fund and PEPFAR projects. The prices include insurance and freight and are applicable to orders of any size.

All prices are quoted in US \$. Currency conversions are made on the day the price information is received using the currency converter site www.oanda.com. Prices are rounded up to the third decimal for unit price and the nearest whole number for yearly price per patient. The annual cost of treatment per patient (ppy) has been calculated according to WHO dosing schedules, multiplying the unit price by number of units required for daily dose, by 365. The price for the smallest unit is included in brackets.

For abbreviations please refer to glossary Page 56 Untangling the Web 10th Edition

COMPANY	PRODUCT	Form	OLD PRICE US \$ ppy (unit price)	UPDATED PRICE US\$ ppy (unit price)
